Probability of at least one local detection before window end
(a) p_det(w) by introduction week, five reporting ratios
ρ = 0.13
ρ = 0.30
ρ = 0.50
ρ = 0.80
ρ = 1.00
not single-peaked: 4 interior local maxima
peak weeks 20/21 (markers: local maxima of ρ = 0.80)
week 19: first detected cases
p_det(w)
Introduction week (analysis week 1-47)
(b) Different endpoints give different quantities (log scale)
p_det (this work, ρ = 0.80)
p_surv (survival-type)
p_carmona (Carmona & Gandon 2020)
p_surv: survival-type comparator
p_carmona: Carmona & Gandon (2020) single-type formula
neither matches the endpoint of p_det
Probability (log scale)
Introduction week (analysis week 1-47)
