(a) Pure-Poisson profile of the reporting ratio
Wilks cutoff 1.92: orientation only, not an interval
lag 2 exceeds 17 at ρ = 0.02 (off scale)
lag 1 (99 grid points)
lag 2 (99 grid points)
lowest lag-1 candidate (ρ = 0.45)
Δ nll from the lowest lag-1 candidate
Reporting ratio ρ
(b) The ρ-m0 ridge: reported versus latent totals
reported series pinned near the observed total
latent burden spans two orders of magnitude
Expected reports (cases)
Latent local infections (cases, log scale)
Reporting ratio ρ
